Add-on name:	Unknown		

Description

Open gvSIG
Open new View
Add layer (/geodata/vector/SHP2D/esp_provincias/esp_provincias.shp)
Add layer (/geodata/vector/SHP2D/provincias_andalucia/provincias_andalucia.shp)
Click in intersection tool from geoprocess
Choose as Input cover esp_provincias.shp
Choose as Input cover provincias_andalucia.shp
Save the intersection in a temporary files
Click Ok
Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)
The problem is after the process stop, it creates a intersection layers with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
