**Description**

Open gvSIG  
Open new View  
Add layer (/geodata/vector/SHP2D/hidro\_andalucia/hidro\_andalucia.shp)  
Click on X and Y shift tool from geoprocess  
Choose as Input cover hidro\_andalucia.shp  
Put on X shift 500  
Put on Y shift 500  
Save the X and Y shift in a temporary file  
Click Ok  
Click cancel button in the new pop up window (This pop up has a fast expire, then hurry up to click cancel button to stop the process)  
The problem is after the process stop, it creates a X and Y shift layer with some elements, I think if we cancel the process it is because we don't want the result and it should not create any layer
