Description

If the capabilities of a WFS is changed after a gvSIG project is created with one of the layers this WFS loaded, the next time we try to open the project it throws an error and cannot open it.

This bug is hard to reproduce as the scenario is not longer available but at least we have the log file.

Manage null value in default ftype as 'ftype not found' and use persisted ftype ID (as in other case, when IDs do not match)

gvsig-desktop:r39489

Prevent error when getting toc icon of unavailable layer.
