Add-on version:			

Description

Añadir al EllipticArc un metodo para inicializarlo que reciba los mismos parametros con los que se crea un java.awt.geom.Arc2D, presumiblemente algo como:

```
public void setPointsStartEnd(Point ulca, double primarySemiAxis, double secondarySemiAxis, double startAngle, double endAngle)
public void setPointsStartExt(Point ulca, double primarySemiAxis, double secondarySemiAxis, double startAngle, double angleExt)
```
