#### Description

The first time I execute a fresh install of gvSIG, the locale is set as English instead of Italian:

```
INFO main org.gvsig.i18n.Messages - setCurrentLocale en
INFO main org.gvsig.i18n.Messages - addLocale en
INFO main org.gvsig.i18n.Messages - addLocale es
```

The issue was already present in BN2234. See also #2650.

#### History

##### #1 - 07/28/2014 04:19 AM - Antonio Falciano

The issue is present in BN2239 yet. So I have to set the locale manually.

##### #2 - 07/28/2014 08:09 AM - Joaquín del Cerro Murciano

- Target version set to 2.1.0-2259-rc3

- Assignee set to Joaquín del Cerro Murciano

##### #3 - 08/08/2014 05:04 AM - Antonio Falciano

If I delete (or simply rename) the "C:\Users\Antonio\gvSIG" folder, the locale is set correctly. However I lose all my previous configurations and restoring them (copying some plugins subfolders from the old gvSIG folder) could be not easy for some users.

So it works fine with a fresh install, only when the gvSIG folder coming from an old version is not present. This make me think that the locale persistence depends by the build version.

##### #4 - 08/27/2014 04:04 AM - Joaquín del Cerro Murciano

- Target version changed from 2.1.0-2259-rc3 to 2.2.0-2311-rc2

##### #5 - 09/19/2014 05:39 AM - Antonio Falciano

If I choose English or Spanish when I install build 2246, then the gvSIG locale is set respectively as English or Spanish. So adding all the other locales

in the installer could solve the issue.

**#6 - 01/28/2015 12:05 PM - Álvaro Anguix**

- *Target version deleted (2.2.0-2311-rc2)*

**#7 - 01/28/2015 12:13 PM - Antonio Falciano**

- *Target version set to 2.1.0-2269-final (rev. org.gvsig.desktop-2.0.84)*

- *Status changed from New to Closed*

I don't remember in which build the issue is disappeared, but the important thing is that we can close this ticket now.
