Description

One of the main features of the jexcel [1] plugin is the multiple spreadsheet support which allows the user to choose one of the sheets that are included in an Excel spreadsheet file. Currently (1.0.0-snapshot build) to choose a specific sheet we must type its order number ("0" for the first one, "1" for the second one and so on). This forces, in most of the cases, the user to previously open the file in Excel in order to know the order number of the sheet that she/he wants to load in gvSIG.

From a usability's point of view it would be highly recommended to add a drop-down list control that shows the name of the available sheets and let the user select one of them.

History

#1 - 07/24/2014 07:24 PM - Manuel Madrid

- Keywords set to jexcel

#2 - 07/24/2014 07:25 PM - Manuel Madrid

- % Done changed from 0 to 80

- Status changed from New to In progress

#3 - 01/07/2015 01:57 PM - Álvaro Anguix

- Status changed from In progress to Closed

Disponible en los últimos builds de la extensión.
