Description

After the update of the EPSG Registry in the jCRS extension, EPSG:3857 is available and consequently USR:3857 is not necessary anymore. Consider also that USR:3857 has a wrong datum association ("D_Popular_Visualisation_Datum" instead of "World Geodetic System 1984"), so it could not perform right conversion to WGS84. Furthermore, it's suitable to consider EPSG:3857 in place of EPSG:3785 (deprecated) where it's used in the OSM extension. Thanks.

True, but I'm not sure that EPSG:3785 (deprecated and not supported by gvSIG) was substituted with EPSG:3857.

#4 - 12/12/2014 08:29 PM - Antonio Falciano

- Target version set to 2.1.0-2268-rc4

- Status changed from Closed to New

True, but I'm not sure that EPSG:3785 (deprecated and not supported by gvSIG) was substituted with EPSG:3857.

In fact, USR:3857 was deleted in gvsig-osm:r120, but EPSG:3785 is still present in the code. For instance, you can find [here](#) and [here](#).
I don't know if this code substitution can definitely solve #2739.

I close the ticket, but unfortunately #2739 doesn't receive any benefit from this fix. In order to solve we need a more recent version of proj4.
