Description

The Difference tool of the gvSIG geoprocesses doesn't work. The final layer is created but it's the same than the original one. It's not loaded at the view directly, we have to load it from Add layer.

Hi all,

I've just tested both Difference geoprocesses against two simple geometries and they worked fine.

Maybe it didn't work in your case because there were some invalid geometries or the input layers were in different CRSs.

Mario, can you attach (or link) your data if possible and the sextante.log? Thanks.

#4 - 10/12/2014 04:20 AM - Antonio Falciano

Duplicate ticket of #2453.
