gvSIG version: 2.1.0	Add-on build:
gvSIG build: 2247	Add-on resolve version:
Operative System:	Add-on resolve build:
Keywords: raster, info, result	Proyecto:
Has patch:	Hito:
Add-on name: Unknown	
Description	
<p>The "Info by point" (for raster layers) tool works only with the first raster layer loaded in the ToC (layer on the top) and doesn't allow to compare the values assumed by two or more layers at the same coordinates. Sincerely speaking I prefer the Information (Query result) tool available in gvSIG 1.12 that works like the "Info by point" for vector layers.</p>
