Description

The map size is locked sometimes when its window is maximized (at least in Windows).
If I close and reopen the map document, the map is shown correctly.
See the screenshot in attachment. There's not trace of error in the gvSIG.log.

En Linux también me ocurre.

Some changes have been done in the layout drawing in order to fix #2905. These changes may have corrected also this bug, but it is difficult to confirm as the bug can't be systematically reproduced. Please, reopen the ticket if it happens again to you.

Hi Cesar,

it happens in build 2308 on Windows 7 in the same way and the only workaround consists into closing and reopening the map document. Cheers.

I have not been able to reproduce it on Windows 7, build 2308. It would be very helful if you can isolate the sequence of steps necessary to systematically reproduce it, as it is otherwise very difficult to debug the error.

Hi Cesar,

you're right. This issue is very difficult to reproduce, because it seems to happen randomly. If you like, we can close the ticket and reopen it only when it can be reproduced in some way. Thank you for the try. Cheers, Antonio
