Description

If we save a legend in sld format in gvSIG 1.11 and then we load it on the same layer in gvSIG 2.1 it's not loaded correctly.

A correct legend in gvSIG 2.1 contains values and labels without the character ".

When we import the legend, the values contain the character " at the beginning and at the end of the text, and the labels doesn't have any text. Any element appears at the view.

I attach the log file.

History

#1 - 10/21/2014 04:53 AM - Mario Carrera

- File gvSIG-leyenda-intervalos-gvsig1-gvsig2.log added

The previous legend was by unique values.

If the legend is by intervals we get an error saying that it can be loaded. I attach the new log file too.

#2 - 10/23/2015 11:59 AM - Álvaro Anguix

- Status changed from New to Outdated
