Description

When we rotate the texts of the coordinates of the grid in a layout, they are on the border lines or very separated.

It should be close to the line by default. An improvement would be to be able to select the position respecting the line (horizontal and vertical displacement).

I attach a screenshot as an example. The X coordinates are on the line, and the Y coordinates are very separated.

Revision 342 - 03/02/2015 07:04 PM - Cesar Martinez Izquierdo

On the grid of the layout (fframegrid), correct the label position so that it never overlaps with the fframeview. Add an anchor option to the dialog to align the center or the corner of the label. Fixes: #3103, #2906. Correctly restore number format: Fixes #3235

The labels should be automatically placed now, all of them at the same distance and never overlapping with the fframeview.

The offset mentioned on #2907 has not been implemented because it is not trivial to implement (requires considering units [pixels, cm, etc] referred to the paper), and it also requires deeper UI design.
