**Description**

If we have two or more raster layers in the view and want to identify the pixel values of each of them, the InfoByPoint allows only to identify the value of a single raster. If we choose a different option from the InfoByPoint layer list, the value remains always the same, so it's not updated in reference to the selected layer.

#### History

**#1 - 02/05/2015 07:22 PM - Antonio Falciano**

- Target version set to 2.2.0-2311-rc2

The InfoByPoint tool for raster layer doesn't allow to identify the pixel value of more than one layer. This is a regression in reference to gvSIG 1.x.

**#2 - 04/27/2015 02:16 PM - Álvaro Anguix**

- Target version deleted (2.2.0-2311-rc2)
