Target version:	
Severity: Critical	Add-on version:
gvSIG version: 2.2.0	Add-on build:
gvSIG build: 2308	Add-on resolve version:
Operative System: Windows	Add-on resolve build:
Keywords:	Proyecto:
Has patch:	Hito:
Add-on name: Unknown	

Description

Steps in order to reproduce this bug:

- create and open a view;
- add a vector layer (e.g. lines);
- start editing and add a new feature;
- open the attribute table and edit field values;
- finally, try to save the edits.

Result: a "Can't delete dbf file to replce with the new dbf" error is shown in the statusbar, the edits can't be saved and the user is forced to discard the changes.

Hi Antonio,
Can you attach the log file?
Thanks!

#2 - 02/06/2015 11:26 AM - Antonio Falciano

Hi Alvaro,
I can't reproduce it at the moment, sorry. It happens randomly only on Windows and it depends by the file locking.

#3 - 04/23/2015 01:50 PM - Álvaro Anguix

- Target version set to 2.2.0-2307 (rev. org.gvsig.desktop-2.0.94)
- Status changed from New to Closed

With the new edition, it works.

#4 - 05/11/2015 10:11 AM - Mario Carrera

- Operative System set to Windows
- gvSIG build changed from 2269 to 2308
- gvSIG version changed from 2.1.0 to 2.2.0
- Target version deleted (2.2.0-2307 (rev. org.gvsig.desktop-2.0.94))
- Priority changed from Normal to High
- Status changed from Closed to New

It happens only in Windows, when the layer is in several Views. If you edit the layer in one of them, that error appears when saving changes. It should be saved even it's in other Views.
