Description			
<p>The "Select by layer" window can be improved in order to have it clear for the user.</p> <p>Two combo boxes can be added, for Input layer and clip layer, and then the action. The Input layer would have the "Only selected elements" option like the geoprocesses, only for some elements, not all the layer). It can be like this:</p> <p>+++++</p> <p>Input layer: (Combo box, only with the layers of that view)</p> <p>"Only selected features" option (check box that will be active if there are any element selected at the input layer)</p> <p>-Clip layer: (Combo box, only with the layers of that view)</p> <p>Select from the clip layer the elements that:</p> <p>Action (combo box with the actions "intersect with, are contained in...")</p> <p>- elements of the input layer.</p> <p>+++++</p>
