In Linux don't work. I think that it's a problem with folder "plugins"

It seems that it's a problem with scripting plugin. Almost in Linux, if you install gvSIG without this plugin, gvSIG works.

Hi Alvaro,

I can confirm. Removing the scripting plugin, gvSIG is executed regularly also in win64.

- Target version set to 2.3.0-2415
- Status changed from New to Fixed
- Subject changed from gvSIG 2.3 build 2414 can't be executed on win64 to gvSIG 2.3 build 2414 can't be executed

Falla en todas las plataformas cuando no existe la carpeta del plugin de scripting en el home del usuario.

- Status changed from Closed to New

I've just tried with a fresh install of 2415 without the gvSIG home folder and gvSIG.sh stops to work when trying to cd to the below scripts directory:

```
INFO launch Running autorun from plugin org.gvsig.scripting.app.mainplugin
gvSIG.sh: cd: line 33: can't cd to C:\Users\Antonio\gvSIG\plugins\org.gvsig.scri
pting.app.mainplugin/scripts
```

If I apply the fix commented in #4033#note-1 and create such directory manually, then gvSIG can be executed. So, in the org.gvsig.scripting.app.mainplugin autorun.sh I'd substitute row 33 with:

```
autorun_dir="$GVSIG_HOME_FOLDER/plugins/$PLUGIN_NAME/scripts"
if [ ! -d "$autorun_dir" ]; then
  mkdir -p "$autorun_dir"
fi
cd "$autorun_dir"
```

and row 38 with:

```
sc_autorun="$autorun_dir/$sc_autorun"
```

- Target version changed from 2.3.0-2447-final (rev. org.gvsig.desktop-2.0.153) to 2.3.0-2417 (rev. org.gvsig.desktop-2.0.123)
- Status changed from New to Closed

It's ok in build 2416, so I close the ticket.
