Description

During operations like loading WMS or WFS the process bar is not well visible. I think the progress bar should be much visible especially in the cases where the processes can be slow due to network problems or to elaborations that are time consuming.

I attach a screenshot showing clearly the issue: the taskStatus title can be too long, especially on laptops, and so it can hide the graphical component of the progress bar.

One possible solution in order to improve the visibility of the progress bar could be:

- place the taskStatus title and message on the left side of the status bar;
- leave the graphical component of the progress bar in the right side of the status bar, but considering a fixed width this time.

Another improvement (or another feature request?) could be to associate a taskStatus to the web service connections in order to understand if they are really working or not.

- Target version changed from 2.3.0-2422 (rev. org.gvsig.desktop-2.0.128) to 2.3.0-2447-final (rev. org.gvsig.desktop-2.0.153)

#4 - 02/18/2016 11:58 AM - Antonio Falciano

Hi Joaquín,

the progress bar is now visible thanks to gvsig-tools:r1384 and its width can change only when the label text is very short. Is it a first approximation or the final fix? Is it possible to consider the taskStatus title like an application message on left side of status bar, instead of an unreadable abbreviated text? The tooltip is not much responsive sometimes.

#5 - 02/24/2016 02:17 PM - Álvaro Anguix

- Target version deleted (2.3.0-2447-final (rev. org.gvsig.desktop-2.0.153))

Yes, it's a first approximation of the solution. After gvSIG 2.3 final we'll improve the usability
