Description

I have a vector of points with an SLD file for styling.

After loading the shapefile in gvSIG I tried to load the legend and selected the SLD file, but gvSIG shows me this message "Unable to read legend - Can't load legend from file *.sld".

Do you have any idea on why it doesn't work?

I attach to this issue the SLD file.

- Target version deleted (2.3.0-2447-final (rev. org.gvsig.desktop-2.0.153))

Hi Silvia, we must to improve the SLD development in gvSIG. We want to do this year, but in a stabilisation process we mustn't add new functionalities.

#2 - 02/25/2016 11:08 AM - Silvia Franceschi

It is in fact something already existing in gvSIG, I mean, the button for loading the style from a file already exists, but it doesn't work properly.

I think this is not a new functionality but a bug, you can decide to not to solve it in 2.3 but please do not throw it away.

#3 - 02/25/2016 12:00 PM - Álvaro Anguix

It's related with SLD versions supported, that means we must support a new version or a new driver for SLD. As I said, it's one of the things to do this year.
