Description

Same of #4250 and #4354 but relative to Groovy scripts. To reproduce the bug simply create the default Groovy script and execute it. Result: no "hola" is printed in the console.

I had not seen that this wa sknow for a year now.

I think we should not claim that groovy works if it definitely does not. This should either be solved or the groovy option in scripting should be removed from the possible options.

- Target version set to 2.4.0-2841-RC3 (rev. org.gvsig.desktop-2.0.209)

I will try to set the RC3 as target version, it would be really good to have.

Hi Andrea,

I think that it should be fixed (if possible) it just in time, if someone has time and resources to do it. For instance, consider also #4646. It's incredible that nobody has noticed that *System.out.println* doesn't work since gvSIG 1.x! Fortunately, we can print in Jython at least. Instead, Groovy support is relatively more recent, but not tested clearly. So I'm agree with you: if a feature is broken, it's better to remove it or type in capital letters that it's unstable. My two cents.

Se trata de un bug de Groovy reconocido desde 2014:

Parece que esta arreglado en la version 2.4.8 de Groovy (Jan, 2017).

Actualizare a la version 2.4.12 (Jun, 2017) que es la ultima estable.
