Description

The geoprocessing toolbox allows to hide some algorithms or rename the groups and subgroups where they are placed. (Toolbox -> Settings -> Edit group)

This configuration is persisted in the file `/plugins/org.gvsig.geoprocess.app.mainplugin/sextante_alg_groups.settings`. But when gvSIG is reopened and the file is read it is incorrectly parsed, and it is generated again. The patch is pretty simple, just a bad regexp is used parsing the file.

The patch affects the file `es.unex.sextante.gui.toolbox.AlgorithmGroupConfiguration` in the `org.gvsig.toolbox` project. The patch is made for gvSIG 2.3.1 and the tag 1.0.31 of `org.gvsig.toolbox`

I attach the patch and the compiled jar.

Gracias por el aporte.

Tengo pendiente subir cambios sobre eso mismo. En mi instalacion con hacer ese cambio no fue suficiente, luego me fallaba en la clase `AlgorithmGroupsOrganizer` con un null pointer error; pero el error, aunque seguramente es mas problematico de lo que parece (algun follon con los classloaders), era facil de rodear.

Ahora subo los cambios.
