Description

Steps to reproduce it:

- create and open a view in EPSG:4326;
- add a PostGIS layer defined in a different CRS than the view (e.g. EPSG:23032) as first layer;
- add the same PostGIS layer of before as second layer;
- change the view extent panning or zooming;
- execute "Zoom to layer" in reference to the second one.

Result:

- the view extent is different from the layer one.

- File *esp_provincias_and_country.zip* added

No he podido reproducir el error.

Las pruebas que he hecho son:

- He cargado el shape "esp_provincias" en una vista en 23030.
- Lo he exportado a una BBDD postgres.
- He creado una vista en 4326.
- He cargado la tabla "esp_provincia", en la ventana de abrir capa me ha reconocido la proyeccion como 23030.
- **No me ha hecho zoom automaticamente a la capa**, esto sería un error.
- La he vuelto a cargar la capa de nuevo.
- He hecho zoom a la segunda capa que he caragado (la primera en el TOC), y lo ha hecho correctamente.
- He desplazado la vista (PAN) y he hecho zoom a la primera capa. Lo ha hecho correctamente.
- He cargado el shape "country" (que esta en 4326), y he comprobado que las capas estanam em su sitio.

El unico error que obserbo es que no me hace zoom automaticamente al cargar la primera capa de postgresQL si la capa esta reproyectada.

Joaquín, the error you mentioned is reported in #4579 yet. I can't reproduce it again too, very strange.

I will check it better tomorrow.

- Target version changed from 2.4.0-2850-final (rev. org.gvsig.desktop-2.0.220) to 2.4.0-2831 (rev. org.gvsig.desktop-2.0.197)
- Status changed from New to Closed

I can't reproduce again the issue in build 2729, so I close the ticket. Sorry for the waste of time.
