Description

Tool to create Multiband raster file is not working in gvSIG 2.4.

I attach several tiff files.

The steps are:

- Load one of them in a View (for example BLUE)
- Access to Raster properties, and Bands tab
- Press "Add" to add another tiff file (for example GREEN)
- After writing the name of the new layer it's not created and an error appears.

It worked in gvSIG 2.3.1
