Description

EN:

Minor problem (no exactly a bug). The extended behaviour 2.x not assuming current view as default, brings several misinterpretations. Specifically, at creating an event layer, it assumes as default, crs from first view, not from current view.

ES:

Problema menor (no es un bug exactamete). El comportamiento extendido de 2.x, el cual no asume la prioridad de la vista activa, trae algunas confusiones al usuario. Específicamente, al crear una capa de eventos, gvSIG asume por defecto el crs de la primera vista, no de la vista activa.
