History

#1 - 04/18/2012 02:17 PM - Cesar Ordiñana

Use the following announcement text:

Subject: New gvSIG-desktop v_2.0.0 build 2047 alpha5

Body:

A new gvSIG-desktop build (2047 alpha5) of the v2_0_0_prep branch has been created and it is available for downloading in the link:

<http://www.gvsig.org/web/projects/gvsig-desktop/devel/gvsig>

Also, a new tag has been created for the build in the subversion repository:

https://devel.gvsig.org/svn/gvsig-desktop/tags/v2_0_0_Build_2047

https://devel.gvsig.org/svn/gvsig-scripting/org.gvsig.scripting/tags/gvSIG_v2_0_0_Build_2047

https://devel.gvsig.org/svn/gvsig-scripting/org.gvsig.scripting.app/tags/gvSIG_v2_0_0_Build_2047

The build is directed exclusively to developers and testers, so it is advised earnestly to NOT download it for production environments.

You can take a look at all the changes performed in the following page:

<https://devel.gvsig.org/redmine/projects/gvsig-desktop/versions/16>

Known installer issues:

- When installed in linux 64 bits, the installer is not able to locate a 32 bits JVM which is needed by our current native libraries. You may modify the gvSIG.sh launcher script into your installation to point the JAVA_HOME variable to your 32 bit JVM location.

Se ha generado un nuevo build (2047 alpha5) de gvSIG-desktop de la rama v2_0_0_prep (futura versión 2.0.0) y está disponible para descarga en el enlace:

<http://www.gvsig.org/web/projects/gvsig-desktop/devel/gvsig>

Se ha creado un nuevo tag para este build en el repositorio subversion:

https://devel.gvsig.org/svn/gvsig-desktop/tags/v2_0_0_Build_2047

https://devel.gvsig.org/svn/gvsig-scripting/org.gvsig.scripting/tags/gvSIG_v2_0_0_Build_2047

https://devel.gvsig.org/svn/gvsig-scripting/org.gvsig.scripting.app/tags/gvSIG_v2_0_0_Build_2047

Se trata de un build orientado a desarrolladores y testers, por lo que se recomienda encarecidamente NO descargar este build para uso en entornos de producción.

Se pueden ver todos los cambios realizados en la siguiente página:

<https://devel.gvsig.org/redmine/projects/gvsig-desktop/versions/16>

Problemas conocidos del instalador:

- Cuando se instala sobre linux 64 bits, el instalador no es capaz de encontrar una JVM de 32 bits, que es lo que necesitan las librerías nativas incluidas en estos momentos. Puedes modificar el script de arranque gvSIG.sh de tu instalación para que apunte la variable JAVA_HOME a la ubicación de la JVM de 32 bits.
