Description

I installed gvSIG 2.0 BN2046, advanced installation, selected the three geoprocess plugins (Geoprocessing support, gvSIG basic vectorial geoprocesses, Sextante geoprocesses) and gvSIG fails at starting.

Attached the log file.

History

#1 - 05/14/2012 01:10 PM - Joaquín del Cerro Murciano

- Priority changed from Immediate to Urgent

- Target version set to 2.0.0-rc1

#2 - 05/18/2012 01:13 PM - Cesar Ordiñana

- Status changed from New to Awaiting response

I have tried to reproduce the error but I have been unable to.

The steps I have performed are:

- Download build gvSIG 2.0 BN2046 and run installation.

- Select advanced mode in the addons installer.

- Add the 3 geoprocess addons.

- Finish installation and run gvSIG.

Looking at the attached gvSIG log file, it seems the main gvSIG plugin (org.gvsig.app) was not installed. Maybe the problem was related to some error in the addons installed. Manuel, could you try again?

I have tried also to create a standard installation of the gvSIG BN2046, and then install the geoprocess plugins through the add-on manager, but the download of the first add-on gets always stopped in the same byte size and doesn't continue anymore. Can't understand why in my first intent has worked and now doesn't. Maybe its related to the network in the CIT?

- Status changed from Awaiting response to Closed

Hi,

This problem is related with #618. I thought I installed the typical gvSIG + the 3 geoprocessing add-ons but due to this other bug, I only installed the 3 geoprocessing add-ons.

I think we can close this issue.
