Add-on name:	Unknown		

Description

There is a new version of the raster add-ons available in the repo. I tried to install them but I couldn't because the add-ons manager don't show them.

1. Run gvSIG 2.0 2046
2. Open the add-ons manager.
3. Select "Install from URL".
4. Select raster category.

Only appears the old installed add-ons (green coloured). It should show both the old ones and the new ones.

History

#1 - 05/30/2012 02:21 PM - Joaquín del Cerro Murciano

- Target version changed from 2.0.0-rc1 to 2.0.0-devel-2050

#2 - 06/12/2012 02:51 PM - Juan Lucas Domínguez

- Assignee set to Juan Lucas Domínguez

#3 - 06/18/2012 01:30 PM - Juan Lucas Domínguez

- Status changed from New to Fixed

This problem does not happen in BN 2048. Probably fixed with recent bugfixes.

#4 - 06/18/2012 04:28 PM - Joaquín del Cerro Murciano

- Target version changed from 2.0.0-devel-2050 to 2.0.0-alpha6

#5 - 07/10/2012 09:31 AM - María Maluenda

- Status changed from Fixed to Under review

¿What is the new version of the raster add-ons available in the repo, that should show the "Install from URL" in the raster category?

Need instructions to check the bugfix, in the gvSIG build 2049

#6 - 07/10/2012 12:34 PM - Juan Lucas Domínguez

I believe this problem happens because the proxy in CITMA is caching the files, so you are never sure if the package list you are downloading is actually the latest available.

You can do this test:

- Download this file:

http://sydney.edu.au/engineering/aeromech/~douga/downloads/AMME_logo/TIFF/AEROMEC1.TIF

(it will take about 1 minute)

- Go to your browser options and delete all cached data

- Download the same file again. This time it's downloaded almost instantly - somebody is caching it (perhaps the proxy?)

I think this happens too with the file:

<http://downloads.gvsig.org/download/gvsig-desktop/dists/2.0.0/packages.gvspki>

#7 - 07/12/2012 08:58 AM - Juan Lucas Domínguez

You can do this test with build 2049:

- Start gvSIG and go to the addons manager.

- Choose the option "from URL" and write this URL in the text box:

<https://svn.prodevelop.es/public/labs/gvsig/gvsig-desktop>

- Click on "Next" and in the list of available packages, you should see:

Document: Layout (buid number 15) is **installed**

Document: Layout (buid number 16) is **available**

If you see that, it means it works well.

(I have provided a new URL because there are doubts about the behavior of the proxy in the CITMA office)

#9 - 08/23/2012 02:03 PM - Juan Lucas Domínguez

I need to create a newer version of some plugin so that this bug can be tested. I'll do it soon.

#10 - 08/23/2012 03:02 PM - Juan Lucas Domínguez

- *Status changed from New to Fixed*

Hello. You have to test it like this with gvSIG 2051:

- Download this file to your PC using a web browser (keeping the name):

<https://downloads.gvsig.org/download/gvsig-desktop/dists/2.0.0/packages.gvspki>

(it has to be HTTPS, not HTTP)

- From the addons manager, choose the option "install from local file" and choose the file you have downloaded.

- In the category "View" you will see that for the plugin "Center view on point", the BN 2060 is installed and the BN 2061 is available.

Currently, this is the only way to test this bug because there is a problem with the proxy in CITMA.

#11 - 08/28/2012 10:03 AM - María Maluenda

- *Status changed from Fixed to Closed*

Closed in the gvSIG build 2051
