Description

1. Run gvSIG
2. Create a new view and open it.
3. Go to Add layer > File and select two files (tested with two shapefiles).
4. Accept. You get an error console.

I can add both files if I do it separately.

See attached the log file.

I close the ticket. If it happens again in the next build, please attach the two files used in the test just in case this is related to the data used.
