gvSIG-desktop:r38635

Fixed by removing on-the-fly change of look-and-feel.

It was causing rendering issues, probably with pre-existing controls (the combo-box itself, I think).

Now restarting is required as label says.

This problem happened probably on Linux only. You can reproduce it on Windows by changing the method "getDefaultLookAndFeel" in Launcher.java

(force it to return "nonWindows..." constant)
