Has patch: No	Hito:
Add-on name: Unknown	

Description

The name of a layer in the TOC should be the long name of the layer in the server. If the layer is a group of WMS layers, the name should be "WMS Group". In this case, put an option in the contextual menu to visualize the legend. This dialog will have the list of sublayers to visualize layer by layer the legend

History

#1 - 07/25/2012 09:47 AM - Ignacio Brodín

- Status changed from New to Fixed

Part of this bug is turned into "feature request".

The name of the layer has be changed. If the layer is a group of WMS layers the name is "WMS Group" else the name is the long name of the layer in the server.
