#### Description

Service URL: <http://geoweb.montevideo.gub.uy/geoserver/ide/wms?>

Just after finish the wizzard and press OK we get an error.

In gvSIG 1.11 it works fine.

Windows 7 64 bits.

See attached the log file.

#### History

##### #1 - 08/02/2012 04:16 PM - Manuel Madrid

The error also happens with WFS: <http://idevisualizador.agesic.gub.uy/cgi-bin/geoserv?service=wfs&#38;version=1.0.0>

##### #2 - 08/03/2012 10:30 AM - Francisco Puga

- Status changed from New to Awaiting response

The error is related to use gvSIG in a machine of 64 bits. I copy&paste the interesting part of the log:

```
DEBUG AWT-EventQueue-0 com.iver.andami.messages.NotificationManager - Error grave de la aplicación. Es conveniente que salgas de la aplicación.
```

```
java.lang.UnsatisfiedLinkError: C:\Program Files (x86)\gvSIG desktop 1.12.0\CrsJniProj.dll: Can't load IA 32-bit .dll on a AMD 64-bit platform
```

IMHO this issue should be closed [for the reason we discuss in the TSC](#)

##### #3 - 08/03/2012 03:59 PM - Manuel Madrid

Ok. I agree. Nevertheless I'm curious about why in gvSIG 1.11 it does work in the same computer. Do you have any idea?

**#4 - 08/03/2012 04:48 PM - Antonio Falciano**

Hi all,

IMHO this kind of issue could be avoided configuring installjammer in order to check if JRE is 32 or 64 bit:

<http://www.installjammer.com/forums/viewtopic.php?f=5&#38;t=2033>

So, if JRE 32 bit is not available, installjammer should be forced to download and install a JRE 32 bit.

@Manuel: gvSIG 1.11 maybe works fine because it was installed with prerequisites (all included version).

**#5 - 08/03/2012 05:37 PM - Manuel Madrid**

Hi Antonio.

Do you mean in this case the user is running gvSIG 1.12 under a 64bits JRE? Is this possible?

Regards,  
Manuel.

AFAIK, it should not be possible, however it seems that the JRE is installed in the 64 bits Program Files folder. I don't know if this makes some difference.

Cheers,  
Antonio

**#7 - 08/06/2012 02:50 PM - Manuel Madrid**

- Status changed from Awaiting response to Closed

Finally the errors were caused by JRE 1.7, on which gvSIG has not being tested.

**#8 - 08/17/2012 10:25 AM - Francisco Puga**

just for the record, i open a ticket #985 with Antonio's suggestion

**#9 - 02/20/2014 10:21 AM - Álvaro Anguix**

- Project changed from Application: gvSIG desktop to | gvSIG desktop 1  
- Category deleted (WMS)  
- Target version deleted (1.12.0-final)
