<b>Description</b>			
Steps in order to reproduce the issue:			
1. Add a local layer (e.g. a shapefile) in the ToC;			
2. Open the Layer Properties dialog;			
3. In Symbology tab, click on Choose symbol button;			
4. Choose one symbol from the library in the Symbol selection dialog;			
5. Finally, click on Properties button in the Symbol selection dialog.			
See gvsig.log in attachment. Cheers.

- Target version deleted (1.12.0-final)

Sorry but i can not invest time in solve this before the release of 1.12 and no other developer seems to be working on it. I must remove the target version.

Further informations about this bug: it seems that it occurs only with JRE 1.7, so IMHO it should depend by the tricky way Launch4j manages the JRE in gvsig-desktop.exe.

Symbology issues are actually the most frequent and tedious ones reported by win users about gvSIG 1.12 final.

User reports with gvsig.log:

- <http://osgeo-org.1560.n6.nabble.com/Problemas-con-Selector-de-Simbologia-Propiedades-GVsig-1-12-final-sobre-W7-td5009388.html>

- <http://osgeo-org.1560.n6.nabble.com/Problema-con-la-ver-1-12-td5005406.html>

The first three reports are relative to JRE 1.7, while the last one is about a 32-bit os with a JRE 1.6.
